

Working Directly With Nature

At the center of our ecological challenge is a massive divide between man and the natural world. Very few of us actually have anything to do with nature on a regular basis anymore. Unfortunately, technology is more than taking over any need that we may have to get outside and go for a hike or see the great outdoors. We are rapidly forgetting who was here first and the role that we humans play in the natural world. Just go outside during a ferocious thunderstorm and you'll remember where your place is in the hierarchy.

Changemakers are needed to help humanity find its way back to nature. Obviously we need people to protect the natural world, but we also need to teach and guide others to once again live in harmony with this amazing ecosystem that we are slowly continuing to destroy.

Check out the opportunities listed below to see if anything strikes your interest. If so, do some more research. Find out what's required of you to get started in that career field. Which college should you attend? Are there internships available? Is there a special school you should apply to?

Where are these jobs located? Do you know anyone in this

career field? What about your friends? Chances are you're not the only one interested!
